## V. Assertion and Reason Type

In the following questions a statement of Assertion (A) followed by a statement of Reason (R) is given. Choose the correct option out of the choices given below each question.

55. Assertion (A) : Simple distillation can help in separating a mixture of propan-1-ol (boiling point 97°C) and propanone (boiling point

56°C).		
A CONTRACT OF A		

Reason (R): Liquids with a difference of more than 20°C in their boiling points can be separated by simple distillation.

Northen and Y. Chem. These compounds are therefore described as optically active, with specific terms for each range based on the direction: a dextrootatary compound rotates the light of a direction in the horning direction (+), while a levorotative compound rotates the light in the anti-hourly direction (¢ âference). For example, amines with distinct substituting are chiral, but with few exceptions (for example, replaced n-chloroaziridines), they quickly undergo "umbrella reversal" at room temperature, leading to racemization.
